As a historian, in which character he most earnestly and solemntly protest against is most eminent, he has just furnished the the justice and the right of the Congress of country with a chapter of the history of the United States to force upon the people Kansas. He gives in sharply defined sen- of this territory a constitution, in the matences the wrongs of the people of that ter-ritory, as our readers have been made famil-does not embody their wishes, but is in diwith them through our columns. He rect contravention thereto, which establishes says to the President, that if he will have in their midst a constitution which they can a peaceful Administration and stand well neither sanction nor tolerate, while it is opwith prosterity, he must respect the will of posed to the well known wishes of a large the people of Kansus. Replying to the majority of their number, and which, in its suggestion that even if this Lecompton Con- inception and general character, is in oppostitution is a wrong it is not a great wrong, sltion to their interests and abhorrent to their

wrong contains within itself the seeds of all half of the people of this territory, the reevil." A few passages from this striking jection of the so called "Lecompton Constihistorical essay, will give a due idea of its tution," now pending before Congress, and the recognition of the rights and wishes of such people in any action by Congress

rights and wishes of the people of this territory as herein expressed, would be a good and sufficient cause for armed resistance, which they would justly deprecate, but which every consideration of honor and patriotism admitted into the Union, may change their would prompt as in maintainance and defence of their just and legal rights.

> The passage of the army bill now before Congress, will increase the army seven thousand men, the annual expenditures seven millions of dollars, and will give the President the appointment of ninety officers whose terms will be for life.

> Rotation of Crops The practical good of rotation of crops is well known, but the philosophic reasons, though much written about have not been fully and satisfactorily explained.

There are two theories. The first or axcretory theory accounts for the phenomena thus : One crop does better where it follows another, because every plant leaves in the soil certain excretory matters, that are not friendly to other plants of its own species; while they are appropriate food for different plants. Plants seem endowed with some-If to the question between the Lecompavoid their own feeces or the dead matter thing of the same instinct as animals, and with heavy monuring, they find it better polare exceptions to the advantage of rotation, ion, and some other garden crops, it is in case of gross feeders, where a grest deal of manure is used which, by its fermentation in the soil, de composes the excretory matter of the crops of the preceeding season. The onion crop is almost always heavily manured, and dressed with ashes, which furnish lime and potash, two powerful alkalies, that act

> So much for this theory. The second theory may be stated thus ! ent from the soil, which, in time, becomes exhausted. It, for instance, the wheat plant demands phosphate of lime, and there is but a small quantity in the soil, it falls to be perfectly developed when it cannot find a full supply of this mineral. It must be restored by the application of manure or by a fallow, or the growth of some other crop that does not require much phosphate of lime for its perfect development. Another example is frequently given of roots orops, ties of alkalies. This theory supposes a root crop to exhaust the ready formed alkaties in a soil, and that alkaline manures must be added or a change of crops be made, while a further disenggration of the soil is setting at liberty new supplies of alkalies.

with great rapidity upon all vegetable fiber.

We think there is some truth in both of the theories as above stated, but that neither of them, and especially not the second one, will fully account for the advantages of a rotation.

It is probably the exhaustion of the organic or vegetable matters in the soil, more to do with the benefit of a change of crops. The main points in these theories were dis
